### The Elspot market

The Nord Pool Elspot market is the world's largest "day-ahead" market for electricity. It is a safe, liquid and transparent marketplace for wholesale electricity trading within the Nordic and Baltic regions. The market price determined at the Elspot market is the general reference price for electricity.

For trading, the Elspot market includes fixed 0.1 MWh power delivery, as well as various block and flexible hourly products. Trading in the next day's hourly orders closes every day at 12:00 noon CET. Offers are made following closed auction principles so that information about other offers cannot be seen.

### Our service

Empower IM has years of operational experience in the Nord Pool market. We have the readiness to carry out Elspot trading for you every day of the year, whether you are a direct member of the market, want to act through a partner of ours or let us trade bilaterally following the same spot principles.

Empower IM is purely a service provider, never a trading party. We always prepare customer-specific instructions for the practical execution of your trading, taking into consideration your operating environment and objectives. Offers can be made on your behalf in the marketplace following your set criteria or based on other predefined terms, including for example the spot price estimate level or the temperature forecast.

Our service includes the possibility to send Elspot offers to the marketplace in electronic format, minimising the margin of error. In our energy management system, EnerimEMS, trading results are also received in electronic format.

Elspot trading is often part of a larger service package. Empower IM services supporting Elspot trading include power consumption and production estimates, planning of electricity procurement, Elbas trading, 24/7 balance management and various reporting and invoicing services.

### Why choose Empower IM?

Using the large and liquid Elspot market as an electricity acquisition or sales channel, you get the best possible price level. With our reliable systems and polished operating models you also reduce management and systems costs to a minimum.

Your estimated need for and production of electricity nearly always differ from commitments pertaining to long-term electricity purchase or sale agreements. The Elspot trading service is perfect for balancing your hourly power balance as accurately as possible in advance. With Empower IM as your perfectly neutral service provider you can always count on an optimal trading outcome.
